TIME LIMITS / MAINTENANCE CHECKS - GENERAL

1. Introduction

- A. This chapter provides scheduled and unscheduled maintenance checks and inspections, recommended by the type certificate holder AQUILA Aviation GmbH as well as the time limits for service life limited components and parts.

2. General Description

In the following, a brief description and intended purpose of each section of this chapter is given.

- A. Section 05-00-00 - Time limits / Maintenance Checks - General. This section provides a general overview of the content and purpose of this chapter.
- B. Section 05-10-00 – Component Time Limits. This section contains the time limits of all service life limited components and parts and recommended time between overhaul (TBO) for components.
- C. Section 05-20-00 - Scheduled Maintenance Checks. This section contains information about recommended scheduled maintenance and inspections. The recommended maintenance and inspection program for the systems and components as well as the relevant intervals are embodied in a checklist included in this section.
- D. Section 05-30-00 - Daily Inspections. In this section pre-flight and post-flight checks are described, that have to be carried out every day the aircraft is in operation.
- E. Section 05-50-00 - Unscheduled Maintenance Checks. This section specifies checks, which have to be conducted after unusual events and incidences such as hard landings.

COMPONENT TIME LIMITS

1. General

- A. Different components and parts of the aircraft are certified for specific service life. When reaching this time limit, the respective item must be replaced or overhauled.
 In order to monitor permissible service life the installation or removal of each item must be recorded in the aircraft logbook.
 Where an interval is given in both flight time and calendar time, the limit which is reached first must be applied.

2. Component Time Limits

- A. Under certain circumstances the replacement or overhaul of components may be required before the time limits listed below are reached.
- B. Replacement time limits, recommended by the type certificate holder AQUILA Aviation GmbH:

Chapter	Component / Part	Replacement Time	Overhaul
25	Restraint assy pilot / co-pilot	no	12 years
32	Rubber elements of the elastomer spring package at the nose gear	5 years	no
32	Flexible hoses of the aircraft brake system	10 years Note 5	no
71	Engine shock mounts	with engine overhaul	no
71	Flexible fuel hoses ¹⁾	5 years	no
71	Flexible oil hoses	10 years Note 5	no
71	Flexible hoses of the cooling system	5 years	no

¹⁾ Hoses that are not covered by the engine type certificate (TC).

C. Vendor Established Component Time Limits

Chapter	Component / Part	Replacement Time	Overhaul
25	ELT battery	Note 1	no
25	Fire extinguisher Air Total	10 years	Note 4
25	Fire extinguisher H3R	12 years	no
31	ASPEN internal battery	800 h or 3 years	no
34	KMD 150 MFD/GPS internal battery	10 years (recommended)	no
34	WINTER instruments	no	Note 6
61	Propeller MTV-21-A/175-05	no	2000 h or 6 years Note 2
61	Propeller governor Woodward A210786	no	6 years, with engine Note 7
61	Propeller governor P-410-13	no	2000 h or 6 years Note 2.
61	Propeller governor P-850-12	no	2000 h or 6 years Note 2
71	Engine ROTAX 912S	no	2000 h or 15 years, 1500h or 12 years, 1200h or 10 years Note 3
71	ROTAX mechanical fuel pump	5 years Note 3	no
71	ROTAX flexible fuel lines	5 years Note 3	no
71	ROTAX rubber parts of the engine (V-belt, hoses, carburetor parts)	5 years Note 3	no
71	Spark plugs	200 h Note 3	no

NOTES:

- Note 1: Refer to manufacturer instructions for battery replacement time limits.
- Note 2: Refer to latest issue of the mt-propeller Service Bulletin No. 1.-(), and to the mt-Propeller E-124 Operation and Installation Manual.
- Note 3: Refer to the latest issues of BRP-Rotax, i.e. Service Bulletins, Service Information and to the ROTAX Aircraft Engines Maintenance Manual for ROTAX Engine Type 912 Series.
- Note 4: Refer to manufacturer instruction for overhauling.
- Note 5: Component has to be checked at every annual inspection. If in good condition service life is extended another 12 months. The maximum service life must not be exceeded.
- Note 6: Though there is no TBO for these instruments, the manufacturer Gebr. Winter GmbH & Co. KG recommends that airspeed indicators and altimeters are subjected to retesting after 5 years.
- Note 7: The 6 year calendar time limit applies for units not in continuous service with a minimum of 120 hours per year. Refer to the latest issue of the Woodward Service Bulletin S/B-33580-M.

SCHEDULED MAINTENANCE CHECKS

1. General

- A. The inspection time intervals chart contained in this chapter shows the recommended intervals at which maintenance and maintenance checks should be carried out on the aircraft.

Annual inspections and 100 hour inspections on the AQUILA AT01-100 must include all inspection items as required by FAR 43, Appendix D, "Scope and detail of annual/100h inspections". Chapter 4 "Airworthiness Limitations" of this manual defines the inspection intervals for continued airworthiness.

The following inspection time intervals chart is aircraft-specific and to be used to document the inspections carried out on a specific aircraft. It should not to be used as the primary inspection checklist.

- B. If an aircraft is being operated under unusual environmental conditions, maintenance intervals may be reduced.

2. Inspection Time Intervals Chart

- A. The maintenance and checks listed are to be carried out at the specified intervals and documented appropriately.

NOTE: For new aircraft the first check is carried out after 25 hours and should be of the extent of a 100-hour inspection.

NOTE: Where an interval is given in both flight time and calendar time, the limit which is reached first must be applied.

- B. Due to recent ROTAX publications the maintenance checks given for the ROTAX engine may not be up to date. Refer to the latest revisions of ROTAX Engine Type 912 Series Maintenance Manual and Service Bulletins.
- C. Due to the multiplicity of equipment coming onto the market, no maintenance instructions are given for electronic equipment. For information on a certain component use the documentation provided by the manufacturer of this component.

NOTES: R* Maintenance Manual for ROTAX Engine Type 912 Series (refer to List of Technical Publications in the Introduction section of this manual).
MT* mt-propeller E-124 Operation and Installation Manual (refer to List of Technical Publications in the Introduction section of this manual).
TSN Time Since New

D. Inspection Time Intervals Chart:

Aircraft S/N		Operating Hours		Registration Number	
Engine S/N		Operating Hours TTSN / TTSO:		Date	
Propeller S/N		Operating Hours TTSN / TTSO:		Type of Inspection	

No.	Pre-Inspection / Engine Ground Test	Reference	Interval		Initials
			100h	other	
1.	Check that the following documents are up-to-date and available upon request. - AT01 Maintenance Manual; - AT01 Airplane Flight Manual; - Aircraft Log Book and Required Certificates; - Engine and Propeller Log Books - Equipment List and Weight and Balance Record; - Airworthiness Directives; - Service Bulletins and Service Information; - Services Time Record.	AT01 Maintenance Manual, AT01 Airplane Flight Manual	X		
2.	Airworthiness directives - Verify all airworthiness directives have been complied with.		X		
3.	Service letters, service bulletins, and service information - Verify all AQUILA GmbH and suppliers service letters, service bulletins and service information have been complied with.		X		
4.	Service time records, equipment list and weight and balance records - Check. Update if necessary.		X		
5.	Aircraft file and technical documentation - Verify complete and in proper order.		X		
6.	Engine and engine compartment - Clean for leakage check.	R* 12-00-00 Sec. 2.1	X		
7.	Perform an engine test run as follows: Start engine and warm-up at 820 RPM for approx. 2 minutes, continue at 1030 RPM, duration depends on ambient temperature until oil temperature reaches 50° C. Rudder pedal brakes and parking brake - Check for proper operation. Propeller governor - Set 1700 RPM and monitor the manifold pressure. Reduce engine speed by moving the propeller control by 200 RPM. Note the RPM drop and manifold pressure. Increase RPM to 1700 RPM. Repeat three times.	R* 12-00-00 Sec. 2.8 32-40-00 MT* E-124	X	1 year	

No.	Pre-Inspection / Engine Ground Test (Cont.)	Reference	Interval		Initials

6.	Baggage door - Check door seal, door latching mechanism, and door hinge for defects and condition. Inspect door structure for cracks or other damage.		X		
7.	ELT - Perform ELT inspection. Check ELT mount and Velcro strap for security of attachment. Replace strap if necessary.	25-62-00		annual	
8.	Seat belts/harnesses for pilot / co-pilot - Check for proper operation, condition, and security of attachment.		X		
9.	Seats - Check security of attachment of the seat assy to aircraft structure. Check operation of seat adjustment mechanism and seat stops. Inspect gas spring struts for oil leakage or other damage.		X		
10.	Seats - Check ease of movement - if required remove seats, clean and lubricate seat rails.	25-10-00		annual	
11.	Center Console - Visually examine the parts of the engine controls, lines, and cables, located in the center console.			annual	
12.	Main landing gear - Inspect fuselage structure at such points and areas where the main landing gear is attached. Check for stress marks, distortion, disbonding, and delamination. Inspect main landing gear strut brackets for distortion, cracks, corrosion, and security of attachment. Check wear and condition of the polyamide inserts. Check bolts for correct torque.		X		
13.	Parking brake valve - Check for evidence of leakage especially at the brake line connections. Check control assy for damage.		X		
14.	Flap actuator - Check for wear and damage, for secure mechanical connections and loose or missing lock devices. Check electrical wiring for wear, damage, and proper routing. Inspect electrical connections and switches for security, corrosion and poor condition. Check function of the limit switches and position indicator.		X		
15.	Elevator trim system - Check the actuator and the springs for security, wear and damage. Check safetying. Check electrical wiring for wear, insulation damage, and proper routing. Inspect electrical connections and switches for security, corrosion and poor condition. Perform system test and check the correct function of the position indicator.		X		
16.	Aileron and elevator control - Check the control sticks, the brackets and the control rods for distortion, cracks, chafing, corrosion and security. Examine all bearings for condition and secure fit. Check safetying. Check travel of control surfaces if the control stick is in the full forward /neutral/ aft, and full left /neutral/ right positions. Verify no binding or jumpy movement of the control sticks through their full range of travel.		X		

No.	Fuselage / Cabin (Cont.)	Reference	Interval		Initials

			100h	other	
1.	Wings with winglets, ailerons, and flaps - Visual inspection for paint coat damage, dents, cracks, holes, distortion and other evidence of failure. Examine all unpainted parts for delamination (white spots).		X		
2.	Wing spars in the fuselage belly - Remove spar covering and perform visual inspection of the spar web, the bonding between the spar web and the carbon fiber spar cap strip, as well as the attachment of the root ribs to the spars. Check security and function of control system brackets attached to the spars.			annual	

No.	Wings, Ailerons, Flaps (Cont.)	Reference	Interval		Initials
			100h	other	
3.	Drain and vent holes - Check for blockage and suspect appearance of any liquid.		X		
4.	Ailerons - Check aileron hinges, bearings, and hinge brackets for security and excessive play. Check bolts and nuts for proper safetying. Examine aileron pushrod for correct installation with stop nuts. Check aileron actuation assembly for suspect binding, and excessive play.		X		
5.	Aileron hinges - Check play allowed: - Axial $\pm 1,00$ mm (± 0.04 in.) - Radial $\pm 0,30$ mm (± 0.01 in.)		X		
6.	Aileron control system - Measure the play in the aileron control system with the control surface locked. Apply a lateral force of 30 N (6.7 lb) to the control stick - the maximum play allowed on the top of the stick is 10 mm (0.4 in.) for both sides. The play should be measured for both control sticks. If excessive play is detected, investigate cause.		X		
7.	Flaps - Check hinge brackets for damaged paint, cracks and delamination. Check bearings for correct fit and excessive play. Check the correct safetying of all hinge bolts and castle nuts with cotter pins.		X		
8.	Flaps - Check flap hinges for play allowed: - Axial $\pm 0,30$ mm (± 0.01 in.) - Radial $\pm 0,30$ mm (± 0.01 in.) Measure the play in the flap control system at the flap trailing edge, at the inboard flap end. Max. play allowed with flaps in take-off and landing positions: ± 5 mm (0.2 in.). No play with flaps retracted.		X		
9.	Flaps and ailerons - Check that the gap between fuselage and flaps, between flaps and ailerons, and at the outboard end of the ailerons is at least 2 mm (0.08 in.).		X		
10.	Stall warning system - Check for condition and proper operation.		X		
11.	For serial numbers from AT01-100 to AT01-126: Bonding between wing spar and upper shell - Check condition.	57-10-00 SB-AT01-002, latest revision		annual	
12.	Navigation / strobe lights - Check operation, condition of glass, and security of attachments.	33-40-00	X		
13.	Inner fuel tank ribs - Check connection of fuel and vent lines to the fuel tank and the flange gasket of the fuel level sensors for signs of leakage.	28-10-00 28-20-00 28-40-00		annual	
14.	Fuel vent lines - Check for blockage.		X		
15.	Fuel tank drain valves - Check for correct function and leakage.		X		

No.	Wings, Ailerons, Flaps (Cont.)	Reference	Interval		Initials
			100h	other	
16.	Fuel filler caps - Check for proper function and leakage.		X		
17.	Tank inlet and upper wing shell in the fuel tank area - Check sealing of the bore hole in the tank inlet. Check wing skin for bubble formation or bulging.	SB-AT01-027, latest revision		annual	
18.	Tie-down points - Check thread and structure around the tie-down attach points for any damage.	10-20-00	X		

No.	Empennage, Elevator, Rudder	Reference	Interval		Initials
			100h	other	

1.	Empennage - Inspect complete surface of the vertical and horizontal stabilizers, the elevator and the rudder for dents, cracks, holes and delamination.		X		
2.	Rudder hinge, elevator hinge and bellcranks - Check brackets and bellcranks for security of attachment and corrosion. Examine bearings for binding and excessive play. Check correct safetying of the lower rudder pivot pin with castellated nut and cotter pin.		X		
3.	Hinge play and control surface positioning - Verify clearance between horizontal stabilizer and elevator horns and clearance between vertical stabilizer and rudder horn is at least 1 mm (0.04 in.). Check elevator hinge and rudder hinge play max. allowed: - Axial $\pm 0,30$ mm (± 0.01 in.) - Radial $\pm 0,30$ mm (± 0.01 in.)			annual	
4.	Elevator control system - Measure the play in the elevator control system with the control surface locked. Apply a force of 50 N (11.2 lb) forwards and then backwards to the control stick - the maximum play allowed on the top of the stick is 10 mm (0.4 in.) for both sides.			annual	
5.	Rudder - Remove rudder if there is noticeable play. Examine the elevator actuation assembly inside the vertical stabilizer. Check for any damage, for correct installation and function and for security and wear. Inspect rudder hinge brackets, rudder yoke and control cable thimble-eyes for security, conditions and wear. Lubricate control cable thimble-eyes as required.	55-40-00		annual	
6.	Rudder rigging - Set rudder pedals in neutral position. Verify the rudder and the nose landing gear are also in neutral position. Set rudder pedals to fully left and then to full right. The rudder must hit the rudder travel stops and the distance from rudder pedal to firewall must be sufficient to apply the pedal brake. Adjust position of the rudder pedals by varying the length of nose wheel steering tubes. Adjust rudder neutral position and control cable tension by means of the turnbuckles in the cabin area.	27-20-00	X		

No.	Nose and Main Landing Gear	Reference	Interval		Initials
			100h	other	
1.	Wheel fairings - Check condition and correct fit. Remove and clean. Check for paint coat damage, cracks, dents and delamination.		X		
2.	Fairing mounts - Inspect for cracks, distortion or other damage.		X		
3.	Nose gear strut mount and wheel fork - Check for deformation, cracks and corrosion. Check nose gear strut journal bearing for proper operation, play and correct safetying.		X		
4.	Nose gear strut and elastomer package - Check strut for deformation, stress marks, and cracks. Inspect correct installation of the nose wheel fork. Inspect elastomer package for wear, deterioration, cracks, correct fit and security. Check journal bearings of the elastomer package for play and condition.		X		
5.	Nose wheel steering - Inspect nose wheel steering tubes for condition, excessive play and correct safetying. Check return springs at nose gear strut for security and verify they are tension-free, when the nose wheel is in neutral position.		X		
6.	Main landing gear - Check main gear struts for deformation, cracks, damage to the paint coat, and corrosion. Inspect wheel axles for security of attachment to struts and for any damage.		X		
7.	Wheels and rims - Clean. Check tires for wear, cuts, foreign matter and deterioration. Inspect rims for security, deformation, cracks and other damage. Examine wheel bearings for excessive play, corrosion and irregular operation. Check tire pressure and proper location of the red slide marks.		X		
8.	Wheel bearings - Clean and lubricate.	12-22-00		annual	
9.	Wheel brakes - Clean. Apply brakes, examine system for leaks. Inspect brake fluid carrying lines at the main landing gear for condition, leakage and security of attachment. Inspect brake discs for cracks, corrosion and wear. Replace brake discs if worn below 4.3mm (0.17 in.). Inspect brake pads for condition and wear. Replace linings when worn to 2.6mm (0.10 in.). Check freedom of movement of pistons and pressure plates.	32-40-00	X

DAILY INSPECTIONS

1. General

- A. Pre-flight and post-flight checks must be carried out daily when the aircraft is in operation.

2. Pre-Flight Check

- A. This check must be carried out before the first flight of the day. In this way, the general condition of the aircraft and its engine can be ascertained.

The scope of the pre-flight check is listed in the AQUILA AT01 flight manual, section 4. Pre-flight checks are essential for flight safety as numerous accidents can be traced back to inadequate pre-flight checks.

3. Post-Flight Check

- A. This check should be carried out after the final flight of the day. For the most part, it is a visual inspection.
- B. The check should contain all points of the pre-flight check.
 - (1) Supplementary measures:
 - (a) Re-fuel
 - (b) Check that the aircraft is properly parked (refer to 10-10-00).
 - (c) Check the logbook entries for remarks about faults or defects, and for correct number of landings and flight hours.
 - (d) If necessary, moor the aircraft (refer to 10-20-00).

UNSCHEDULED MAINTENANCE CHECKS

1. General

- A. Special checks are to be carried out when an incident has occurred that may have caused damage to the aircraft or impaired airworthiness.

In addition, a 25-hour inspection must be carried out on new aircraft and its engine, on overhauled engines and after extensive airframe repairs.

2. Special Checks

A. 25-Hour Inspection

After the first 25 hours of operation of a new aircraft and its engine or an overhauled engine or after extensive airframe repairs, an inspection of the extent of a 100-hour inspection must be carried out (refer to 05-20-00).

After the first 25 hours of operation of new or overhauled engine, the engine and the propeller must be inspected. Refer to ROTAX Aircraft Engines maintenance manual for ROTAX engines type 912 series for detailed information on this inspection.

B. Hard Landing

After an excessively hard landing or other unusual loading of the landing gear a thorough inspection of the affected components and their attachments is required. Even if no obvious defects are detectable, a visual inspection must be carried out. Perform the following:

- (1) Prepare aircraft for visual checks as follows:
 - (a) Remove engine cowling (refer to 71-10-00).
 - (b) Remove landing gear fairings.
 - (c) Inside the cabin and baggage compartment - remove carpets and floorboards as required to gain access to the landing gear mounting brackets (refer to 25-21-00).
- (2) Inspect main landing gear.
 - (a) Check wheel fairings for cracks, dents and delamination.
 - (b) Check fairing mounts for cracks, distortion and other damage.
 - (c) Check fuselage structure visually at such points and areas where the main landing gear is attached. Check for stress marks, distortion, disbonding, and delamination. Check main landing gear strut brackets for distortion, cracks and security of attachment. Check condition of the polyamide inserts. Check bolts for correct torque.
 - (d) Check main gear struts for deformation and cracks. Examine wheel axles for security of attachment to struts and for any damage.
 - (e) Inspect tires for integrity and proper location of the red slide marks.
 - (f) Inspect brake fluid carrying lines at the main landing gear for condition, leakage, and security of attachment.

- (3) Inspect nose landing gear.
 - (a) Check wheel fairing for cracks, dents and delamination.
 - (b) Inspect fairing mounts for cracks, distortion and other damage.
 - (c) Check nose gear strut mount for deformation and cracks. Check nose gear strut journal bearing for proper operation and play.
 - (d) Check strut for deformation, stress marks, and cracks. Check elastomer package for deterioration, cracks, correct fit and security. Check journal bearings of the elastomer package for play and condition.
 - (e) Inspect nose wheel steering tubes for condition and excessive play.
 - (f) Inspect tire for integrity and proper location of the red slide marks.
- (4) Re-mount all items removed during the inspection.
- (5) Perform a brake and steering system operational test (refer to 32-40-00).

C. Engine Fire

After an engine fire, carry out the following:

WARNING: IF IT IS SUSPECTED THAT PARTS OF THE STRUCTURE OR COWLING COULD HAVE BEEN DAMAGED BY HIGH TEMPERATURES (INDICATED BY BLISTERING ON THE PROTECTIVE COATING), THE MANUFACTURER MUST BE CONTACTED FOR DEFECT APPRAISAL BEFORE THE AIRCRAFT IS FLOWN AGAIN.

- (1) Disconnect battery (refer to 24-30-00).
- (2) Remove engine cowling (refer to 72-10-00).
- (3) Examine engine cowling. Check for signs of fire damage.
- (4) Examine electrical cables for damaged insulation.
- (5) Examine fuel lines for damage of the fire-protection sleeves.
- (6) Check oil lines for damage of the fire-protection sleeves.
- (7) Check air filter element for fire damage.
- (8) Examine engine mount and shock mounts for any fire damage.
- (9) Check all other hoses and pipes, as well as all gaskets and seals for fire damage.
- (10) Replace damaged items.
- (11) Re-mount engine cowling (refer to 72-10-00).
- (12) Perform an engine test run (refer to 05-20-00).

D. Violent Stop of the Engine

In event that the propeller has touched the ground or the engine has been inadvertently stopped violently (shock loading), the propeller gear box must be disassembled and inspected by an authorized workshop. For further information on engine inspections necessary after a propeller ground strike and for more general information, refer to the relevant technical documents and the ROTAX Maintenance Manual.

CAUTION: ONLY QUALIFIED TECHNICIANS (AUTHORIZED BY THE NATIONAL AVIATION AUTHORITY AND AFTER SUCCESSFULLY COMPLETING THE RELEVANT ROTAX TRAINING COURSE) ARE AUTHORIZED TO PERFORM THIS WORK.

Check additional equipment (external alternator, hydraulic governor, ignition unit, coolant and oil hoses) for damage.
